Github.

① Step-1 Account banna hai.

Step-2 On ⊕ icon Create Repo.

Step-3 Repo k bad V.S Code terminal m.
Steps.

① git init

② git Commit -m "first Commit"

③ git branch -M main

④ git remote add Origin " https://github/
[yourgithubId | Reponame]
↑.
Apna Id aur Repo name
OK.

⑤. git push -u Origin main.

Ho gaya bhai ab.

Github pe push ho gaya.
Are bhai mene ek changes kiya abhi
usko bhi Ism add karna.
॥
Don't worry I am here.

V.S code m likha to phir se
changes update ho jayege.

① git add.

② git commit -m "Changes new"

③ git push origin main

Deployment→ Always upload backend first.
I use Render for backend because it free.

wo url milega backend ka phir.
use
.env m frontend se connect karna.
Aur frontend m localhost link hata k.
(✓) {process.env.backendurl}. api/next.

(X) localhost:5000/api/next
↳ Remove it because you
are in Production phir connect hone k bad.
Github pe frontend uplaad.

phir frontend Vercel pe add kardena.
jo .env m ho use upload kar.
dena yaha par simple.

* Agar Tumne yaha tak notes dekha hai mera.
then congratulation. your website is.
ready * Agar na ho yad aaye to message
kar dena m deploy m help kardunga
